Survey Date

Humber NHS NHS Foundation Trust

NHS Safety Thermometer Survey

Staff Member Name

Staff Member Contact Phone Number

NHS The Information Centre for health and social care

Note: Submit a 'nil' return if you were at work on the survey date but didn't see any patients (eg training, duty cover, office work only)

Pressure Ulcers - Record the Category of the patient's worst Old and New pressure ulcers. Old - developed within 72 Hours (3 days) of admission to your organisation/onto Caseload. New - developed 72 or more hours after the patient was admitted to your organisation/onto Caseload.

Patient Falls - Record the severity of any fall that the patient has experienced within the previous 72 hours (3 days) in a care setting, including home, if the patient is on a district nursing caseload. Do not tick 'no harm' to indicate the patient did not fall, use 'no harm' only if the patient had a fall but it was a 'no harm' fall you wish to report

UTI - Use Old UTI if treatment began before admission. New if after admission.

Catheters - If patient has had a urinary catheter during the last 72 hours (3 days) select the number of days it was in place

VTE Assess - Is there a documented VTE Risk assessment?

VTE Proph - If the patient is at risk, has VTE prophylaxis started?

VTE Treatment - If the patient is being treated for VTE choose type of VTE. Use Old categories where the patient had the VTE before admission, New if the patient developed the VTE after admission.

It is essential that these 3 elements are fully completed for every patient seen on the survey date

Tick if Yes

Reported Harms: tick each element which is known/present on the survey date using the above guidance.
Note for Falls: please do not tick 'no harm' unless the patient had a fall which can be categorized as 'no harm'.
